# Pocket PIP

Mobile-friendly
Android & iOS compatible

End-user convenience
for smooth consultation

Online reporting
better insights, better results

YOUR CONVENIENCE AS A STANDARD

Astrow, a flexible and comprehensive time and attendance platform that generates automatic calculations with simple bookings and clearly displays all time-related information.
To get the most out of this time and attendance solution you can expand it with different modules and mobile apps (both for Android and iOS) that are all available on a "pay-as-you-go" basis.
With more than 25 years of experience in time and attendance, we have expanded Astrow to meet the needs of our customers. This experience allows us to further use our knowledge in the development of new innovative solutions.

PIP, YOUR PARTNER IN CASE OF EMERGENCY

The **Presence Indicator Panel (PIP)** module / **Pocket PIP (mobile)** gives you a "real-time" overview of who is currently present and who's not. With your Astrow user login you get immediate access to your team in **PocketPIP**. It is especially suitable in an emergency situation. You can easily activate an evacuation list (Roll Call). In this list you can indicate whether an employee is safe or in danger. And the employee can also do this himself via the app or at the ST-25 terminal. If you also work with our Visitor management module, even the visitors are automatically included in the evacuation list and they can also indicate that they are safe.

EVERYTHING YOU NEED FOR A GOOD OVERVIEW

Do you have employees who work at different sites? Our **Pocket PIP** has been expanded with "**Company sites**". An employee from site X will not receive the emergency call from site Y. If this employee is however present on site Y (by badging there) then this employee will also receive the necessary notifications and be included in the evacuation list (Roll Call).

After the emergency, the finished list can be exported directly from the **Pocket PIP** for reporting.
