

Visitor Management

Convenience
for both visitor & host

Maximal ROI
major increase in efficiency

Compliance
with GDPR regulation

DESIGNED FOR CONVENIENCE

Unlike traditional visitor registration, Amano Visitor Management combines registration, evacuation processes and access control in one single system. This integration offers considerable advantages in terms of security, and at the same time contributes positively to the end-user convenience. Once registered, visitors will receive an e-mail with useful information like a site map, and their host will be automatically informed either by e-mail or text message. For maximal efficiency, this module can even be integrated in your Amano Xparc parking solution.

MINOR INVESTMENTS, MAJOR RESULTS

Save on additional hardware by having the Visitor Management installed on any recent Android or iOS device. One central device can be shared by several companies located in the same building and it is even possible to register multiple visitors in one go. As a cherry on the cake, a picture can be added for identification. Low costs of ownership and a significant increase in efficiency guarantee a quick return on investment.

GDPR COMPLIANCE THROUGHOUT

Let the Visitor Management module help you comply with GDPR regulation. Your visitors will be automatically informed of the way their personal information will be processed, and can count on full privacy as their data will by no means be accessible to others.
