

Projects

Activity tracking

Online reporting
Knowledge is power

End-user convenience
Accessible user interface

Mobile friendliness
Android and iOS compatible

BETTER INSIGHTS, BETTER RESULTS

Increase your employees' overall efficiency by measuring the different activities they carry out. After you've chunked down a project to its separate activities, employees can register the time they work on each and every single one activity. The integrated, fully configurable reporting tools help you assess employees individually, identify training needs and—in the end—increase overall organizational efficiency.

USER-FRIENDLY INTERFACE

Just like all other Astrow solutions, the Astrow Projects module was designed with the end-user in mind. Employees easily track the time they work on a particular task by making a booking at the beginning and at the end of every activity. Managers—in turn—can effortlessly create new activities, modify existing ones and access the built-in reporting tools from the Astrow web software.

MOBILE, JUST LIKE YOUR EMPLOYEES

Benefit from efficient project tracking no matter when and where! Aware of the fact that employees are getting increasingly mobile, we decided to offer the Projects module not only on our ST-25 time management terminal, but also on recent Android or iOS smartphones and tablets. This allows for projects to be measured even when employees are working outside the company.
